

CLAIMS

1. A composition in the form of a liquid/liquid dispersion of the micro-emulsion type or solution of an active agent, concentrated and dilutable,
- 5 characterised in that it is transparent like water and essentially consists of
- at least 10 % by weight of a hydrophobic active agent having a KB (Kauri butanol) index greater than or equal to 30 or less than 10 % of a N-alkyl pyrrolidone and
 - a glycol ether or a mixture of two glycol ethers, the first glycol ether in the
- 10 latter case having a HLB 0.8 greater than that of the second glycol ether.

2. A concentrated composition as defined in claim 1, characterised in that the hydrophobic active agent is a hydrophobic active agent with a KB index greater than or equal to 40.

3. A concentrated composition as defined in claim 1 or 2,

15 characterised in that it contains a mixture of two glycol ethers.

4. A concentrated composition as defined in one of claims 1 to 3, characterised in that it is in the form of a micro-emulsion.

5. A concentrated composition as defined in one of claims 1 to 4, characterised in that it contains dipropylene glycol methyl ether as a glycol ether.

6. A concentrated composition as defined in claim 5, characterised in that it contains propylene n-propyl ether, dipropylene glycol n-propyl ether or propylene glycol n-butyl ether as a second glycol ether.

7. A composition as defined in one of claims 1 to 6, characterised in that it contains 50 % to 90 % by weight of glycol ether or ethers.

25 8. A composition as defined in one of claims 1 to 6, characterised in that it is diluted so that the diluent phase represents up to 99 % by weight of the micro-emulsion or diluted solution.

9. A method of preparing a concentrated composition as defined in one of claims 1 to 7, characterised in that the liquid active agent or active

30 agents are mixed under agitation with the glycol ether or ethers in order to emulsify or solubilize the latter.
